EXECUTIVE SUMMARY

This proposal describes a practical adoption path for reusable GraphCompose templates, render tests, and runnable examples across billing, hiring, and client-facing delivery workflows.

Scope

Introduce built-in invoice and proposal templates with a consistent business presentation layer. Keep the production artifact clean by moving development-only preview code out of the published runtime scope.

Deliverables

Public DTOs and template interfaces for invoice and proposal rendering. Render tests and a standalone examples module that generates PDF files on demand.

TIMELINE

Phase	Duration	Deliverable
Week 1	5 days	Invoice API and first template delivery.
Week 2	5 days	Proposal layout, review loop, and render tests.
Week 3	3 days	Examples module and README handoff.

PRICING

Item	Description	Amount
Foundation	Template APIs and DTO modeling	GBP 3,200
Document delivery	Invoice and proposal templates with tests	GBP 4,450
Total investment	Fixed-price project delivery	GBP 9,500

ACCEPTANCE

- Proposal pricing is valid until the stated expiration date.
- Additional template families can be scoped in a separate phase.

Prepared to demonstrate the business-document side of GraphCompose.
