CanvasLayerNode — controlled free-canvas

Every element below is placed at an explicit (x, y) inside the canvas's 523 x 360 bounding box. Coordinates use the screen convention: (0, 0) is the canvas's top-left, positive x extends right, positive y extends down.

CERTIFICATE OF ACHIEVEMENT

GraphCompose

AWARDED TO

Jordan Rivera

Issued for a page composed on a free canvas: every line placed at an exact point, wrapped to a width the layout was told rather than left to infer.

Lead Engineer

Project Owner

Notes: the canvas reserves a fixed 523x360 rectangle in the surrounding flow regardless of where children land. Children whose (x, y) falls inside the bounding box render in source order; clip policy CLIP_BOUNDS hides anything that overflows.
