MSc COMPUTER SCIENCE
KTH Royal Institute
2014 – 2016

BSc SOFTWARE DESIGN
Uppsala University
2011 – 2014

LANGUAGES

- Swedish
- English
- German

PROFILE

Backend engineer with nine years on payment and identity systems, most of it owning services end to end: API design, the data model underneath, and the on-call rota that follows. Comfortable in a team that ships small and often, and the one who writes the runbook nobody asked for.

EXPERIENCE

SENIOR BACKEND ENGINEER 2021 – Present
Nordkassa | Stockholm, SE

- Led the split of the settlement monolith into four services with no customer-visible downtime.
- Cut p99 authorisation latency from 780ms to 210ms by reworking the ledger write path.
- Introduced contract tests between payments and risk, ending a class of release-day rollbacks.
- Mentors three engineers; runs the internal design review.

BACKEND ENGINEER 2018 – 2021
Vinge Identity | Gothenburg, SE

- Built the OAuth2 and OIDC provider now serving eleven internal products.
- Moved session storage to Redis with a migration that ran live for six weeks.
- Wrote the audit pipeline the compliance team still reports from.

SOFTWARE ENGINEER 2016 – 2018
Almgren Data | Uppsala, SE

- Delivered ingest and reporting services for retail forecasting customers.
- Replaced nightly batch reconciliation with a streaming job on Kafka.

PROJECTS

LEDGERKIT 2024
Open-source double-entry ledger for JVM services, with a property-based test suite over the posting rules.

ONCALL DIGEST 2022
Weekly incident summariser that reads alert history and drafts the retrospective agenda.
