Colour emoji by shortcode

Write **:rocket:**, get 🚀 — an inline vector glyph on the baseline. Ship it ✅ 🎉

emoji(":code:", size) — a coloured glyph between words

✅ Deploy succeeded ⚠️ Disk almost full ℹ️ 3 updates available

the full GitHub shortcode set resolves

👍 ❤️ 🔥 💯 😄 👀 ✨ 🐛 💡

an unknown shortcode renders as its literal text, GitHub-style

Known 🎉 · unknown :does_not_exist: :not_a_real_code: (rendered as text)

size is the glyph's height in points; the glyph keeps its aspect ratio

Scales with the text 🚀 🚀 🚀 🚀
