Section presets

Five fluent shortcuts on every flow / section / module: **band**, **softPanel**, **accentLeft / Right / Top / Bottom**, plus the canvas-wide **pageBackground**.

band(BRAND) — full-width section strip

softPanel(color) — 8pt corner + 12pt padding

softPanel(color, radius=16, padding=20)

EXPERIENCE

headingBar(text, bar -> ...) — a filled, rounded title band added above the body in one call

accentLeft(BRAND, 4) — vertical strip on the left edge

accentRight(ACCENT, 4) — vertical strip on the right edge

accentTop(BRAND, 3) — horizontal rule above the panel content

accentBottom(ACCENT, 3) — horizontal rule below the panel content

DocumentCornerRadius.of(0, 18, 18, 0) — only right corners rounded

Stacked accents

accentLeft + accentBottom compose without breaking the rounded corner — both edges paint independently of the soft panel.

Each preset is a thin alias over fillColor / cornerRadius / padding / DocumentBorders — nothing magic, just better-named.
