Scripts the bundled fonts cover

Five families ship in graph-compose-fonts 1.1.0. Each carries its own script plus Latin, and none carries another's.

Arabic `FontName.AMIRI`	مرحبا بالعالم	Shaped into contextual forms before measurement, so the letters join.
Hebrew `FontName.DAVID_LIBRE`	שלום עולם	Reordered for display; the Latin and the digits inside keep running forwards.
Georgian `FontName.NOTO_SANS_GEORGIAN`	გამარჯობა	The family also carries Mtavruli — the capitals headings use, a block of its own.
Armenian `FontName.NOTO_SANS_ARMENIAN`	Բարև աշխարհ	Both cases, and the ech-yiwn ligature that is the Armenian word for "and".
Korean `FontName.GOTHIC_A1`	안녕하세요 · Müller	All 11 172 syllables, and the accented Latin a line may mix in.

Chinese and Japanese have no bundled family: the official static Noto CJK faces use CFF outlines a PDF cannot embed, and the variable ones draw at their default weight, which is Thin. Register your own with FontFamilyDefinition.
