## ENGINEERING PROFILE

Platform engineer with 10+ years building resilient document-generation pipelines, layout engines, and developer-facing template systems. Specialised in high-throughput PDF rendering, semantic authoring DSLs, and turning brittle production-ops scripts into typed, snapshot-tested libraries that scale.

## LEADERSHIP EXPERIENCE

### Senior Platform Engineer / 2024-Present

Northwind Systems

Led the reusable document-generation platform serving billing, hiring, and reporting flows across 8 product teams. Reduced template maintenance time by 70% by retiring per-team PDF scripts in favour of one canonical engine.

### Software Engineer / 2021-2024

BrightLeaf Labs

Built backend services and production document rendering pipelines processing 2M+ documents per month. Drove the migration from iText to a custom layout engine, eliminating licensing risk and cutting p99 render latency from 1.4s to 380ms.

## TECHNICAL EVIDENCE

**GraphCompose** ([Java 21](#), [PDFBox](#), [Maven](#), [JMH](#)) - Declarative Java PDF layout engine. Semantic DSL, slot-based templates, snapshot testing. Powers production CV / invoice / proposal pipelines for hiring tools and billing systems. (Open source)

**Template Studio** ([Kotlin](#), [Compose Desktop](#), [PDFBox PNG diff](#)) - Internal tool for evaluating CV, proposal, and invoice output across 14 design presets. PNG diffing, side-by-side layout, baseline freezing.

**LayoutLint** ([Java 21](#), [JavaParser](#), [Spoon](#)) - Static analyser that flags fragile authoring patterns (deeply nested rows, untyped offsets, implicit page breaks) before they ship to production.

**ChromeForge** ([Java](#), [GraphCompose](#), [Pandoc bridge](#)) - Editorial-magazine document toolkit built on GraphCompose: cinematic covers, pull quotes, multi-column flow, sidebar callouts.
