

# Emoji rendering — SVG (vector) vs PNG (raster)

Both columns draw the same glyph at 22 pt: the SVG column is the engine's native vector render, the PNG column rasterises that glyph and embeds it as an image.

| Shortcode          | SVG (vector)                                                                        | PNG (raster)                                                                        |
