

Inline highlight chips

Text on a rounded background, on the baseline — **inline code and status badges**. Add the `graph-compose` dependency from `io.github.demchaav`.

`code(text)` — monospace on a light chip, engine defaults

Run `./mvnw verify` then tag `v1.9.0` to publish `graph-compose-emoji`

`chip(text, fg, bg)` — a coloured status badge between words

Paid

Overdue

On hold

`highlight(text, style, bg, radius, padding)` — the full primitive

Pill

rounded

square

sharp

a multi-word highlight wraps across lines — one continuous fill per fragment

Reviewer note: this longer highlighted phrase is intentionally verbose so that it spans more than one visual line, and the engine still paints a continuous rounded chip on each line fragment rather than one box per word — done.
